Meadow Pointe Water Cut Off Map December 2022

- A. **Building Cut Off Valve** –Each Building has a cut off valve that should only be used to do maintenance to your unit if you cannot locate your individual cut off valve. You must notify the Management Company, DAMC, at 210-561-0606 or manager@damctx.com prior to turning off the water to the entire building. Only Licensed and Insured plumbers can turn off the water to the entire building. Please notify your neighbors prior to turning off the water to the building.
- B. **Unit Cut Off Valve** –Each Unit should have a cut off valve. If you need to do maintenance work to your unit, only cut off the water to your unit. If the information below lists your unit cut off valve as “not found” and you have located the cut off, please contact DAMC so we can update the list.

It is everyone’s responsibility to control water usage. Interior maintenance should be done on a regular basis. Exterior leaks including water heaters, faucet spigots and individual cut off valves should be repaired immediately. Water is the Associations largest expense. Therefore, excessive and / or blatant waste of water will force the Association to charge you for the excessive usage cost.
